Did Your System Weather Winter?

Repeated freezing and thawing is a lot to endure, even for components designed to tolerate the elements. Outdoor watering might only be needed one or two days per week in May, but when you get your system back up and running, check on the following:

- 💧 Run a test cycle on a scheduled watering day. Make sure all sprinkler heads are popping up, spraying evenly, and are pointed properly. Broken, clogged, and misaligned sprinklers prevent water from getting to where it's needed and run up a tab on your bill.
- 💧 Sprinkler controllers have all sorts of functions and setting options. Check out our brief overview of how to program controllers to run as intended at ECCV.org/knowledge-drops. Have a specific question or want more information? Sign-up to attend an **H2O, Now You Know** virtual session this month. *(See info to right)*
- 💧 Hit the easy button of water efficiency and request a **FREE Slow the Flow** system assessment. A water efficiency pro will schedule a time to come to your home, give your system a full check-up, and provide you with a custom report to maximize your outdoor water efficiency. No obligations, just helpful recommendations. *(See info to right)*
- 💧 Connect your ECCV account to the **FREE Eye On Water** app. The app talks directly to your water meter giving you any-time insight into your water usage. Use it to confirm that overnight watering is happening as desired, or alert you to possible leaks. Get started at ECCV.org/homeowner-information-eow.

ECCV offers customers a variety of water efficiency resources and tips for outdoor watering season. Take a look at our Customer Conservation Center at www.eccv.org/customer-conservation-center and the services and offers in this newsletter.

H2O, Now You Know

Get watering tips and answers in a live, virtual Q&A
Upcoming Virtual Sessions:

Monday, May 6
6:30 p.m.

Tuesday, May 14
10:30 a.m.

Saturday, May 25
11:00 a.m.

Register to attend: ECCV.org/sign-up

Slow the Flow

Solve your sprinklers
